

Vijaita Ghosh

I'm a Product Designer with around two years of experience designing SaaS products, CRM systems, AI products, and websites. I started my career in Journalism and Mass Communication, where I first got interested in marketing and design. Journalism also taught me how to understand people and communicate clearly, which naturally carried into my work in design.

Since moving into product design, I've worked across insurance, recruitment, healthcare, construction, and EdTech, designing products and experiences that are simple and easy to use.
